

SEH-Classic specifications

Lead-acid battery with lead-calcium-silver grids • Dry-charged

Starting power in retro look

Latest battery technology in classic design. This vintage car battery is 80% hand crafted. The black case has the traditional hard-rubber look. We recommend this, if you also value a classic look in the engine compartment, without compromising on technology.

When you receive your new battery, if it is dry, remember its service life begins when you add the acid. Do not fill it more than 10 mm. above the elements. Within 2 hours of filling, ensure that the battery goes on charge. The battery will be charged when all cells are gassing freely. Periodically recharge during periods of vehicle inactivity.
