Chairman of Steinhof Company

Quality confirmed by certificates

Tradition, Quality, Innovation.

When in 1960 Stanisław Steinhof - the father of the current owner together with several employees started production in a home workshop, his goal was to create the successful company with Polish capital. Today, the Steinhof company together with : 200 employees, 3 branches, 2 professional car services with a total area of over 15,000 m², is one of the largest manufacturers of tow bars in Europe and one of the largest manufacturers of brake pads in Poland.

The basis of Steinhof's success is high quality of all products, employee productivity and customer satisfaction. Safety is our priority, which is why every day highly qualified employees ensure that the production meets the strictest quality requirements.

Constant investments in technological development and cooperation with the best research centers of Polish technical universities allow us to create an innovative production base.

Thanks to the modern laboratory and through the internal research and development center, we care about the intensification of technical thought that sets up our company in the elite group of innovative business in the automotive industry.

What do you need to know before mounting the tow bar ?

- Before mounting of the tow bar check the user manual and registration book of the car whether the vehicle is equipped to tow a trailer
- Tow bar can be used and operated in a car with proper technical conditions of body elements. Tow bar has to be installed and operated in a car according to this instruction
- A trailer hitch is a safety-critical part and may be fitted only by qualified personnel. Any alteration or modification of the towing hitch is prohibited
- Remove the insulating compound and underbody coating - if there is any - from the area around the contact surface of the trailer hitch
- In the case of vehicles equipped with parking sensors, ride with a mounted ball causes detection it by sensors as obstacles. In this case, adjust the sensing range or disable the acoustic parking System. If using trailer hitches with removable ball, the acoustic parking system should function normally when the ball of tow bar is not in the operating position
- It should be considered information provided by the vehicle manufacturer about the maximum load value (maximum mass of the full trailer and permissible vertical load of the tow ball) at the same time acceptable parameters of the towing hitch cannot be exceeded
- The trailer must be linked with an elastic joint with proper durability (cord, chain)
- Check the screw connections after driving approx. 1000 km and for loosening nuts, the bolts must be tightened. Always keep the towball clean and lubricated with grease. Use the towball shield. All mechanical damages of the tow bar preclude its further exploitation. Damaged tow ball cannot be repaired. In case of breaking the rules of montage or improper usage manufacturer do not take responsibility for possible damages
- Follow national guidelines for technical acceptance of the tow bar
