1

Before attempting to assemble this product, ensure that the bucket handle is placed down as shown in the picture. Lift the closed lid to reveal the toilet seat so that the 2 parts can be assembled properly.

2

Locate the channel on the lid and the lip on the bucket to slot the two together. Ensure that the two parts are properly aligned before continuing.

3

Once the lid and bucket have been aligned apply pressure around the rim starting at the back of the lid all the way around until you hear a 'click'. Once secure, the product can be used.

**A TIGHT FIT IS IMPORTANT TO MAKE SURE CONTENTS DOESN'T SPILL
PLEASE NOTE THAT WHEN COLD THE LID MAY BECOME MORE DIFFICULT TO ATTACH.**
